

ARC200

The ARC200 or Adjustable Rate Control 200 can be utilized for double or single head applications that require extremely low dosing of chemical on one head or both. The various pump controller settings and stroke length adjustments are no longer relevant when this device is added. Set your pump controller to the lowest or highest setting and adjust your rates simply by turning the set screw on the ARC. Your turndown ratio from 0% to 100% is by far unmatched to any pump in the industry.

The ARC200 can be easily added to any existing pump with one simple adapter. You can now measure your injection in milliliters rather than pints, quarts, or gallons.

Specifications

Pump Application

Fluid Head

- Utilized with Single or Double Head Pumps
- 316 SS Body
- Range: 1% to 100% of Total Injection Capability

Plunger

- 316 SS, Ceramic
- Sizes: 1/4", 3/8", 1/2"
- All Currently Available Packing Selections

Connections

- Pump Housing Bushing
- Head Adapter: Extended Length Yoke

Bleeder Valve

- 316 SS, Located on Pump Head

Power

Control Options

- Slide Support
- Reciprocating Block/Plunger Driven
- Adjustable Setting Nut with Lock Nut

LOW Maintenance

NO Pump Controller Settings

NO Stroke Length Adjustment Pins

Max Pressure: Plunger MAX

0% - 100% of Total Output

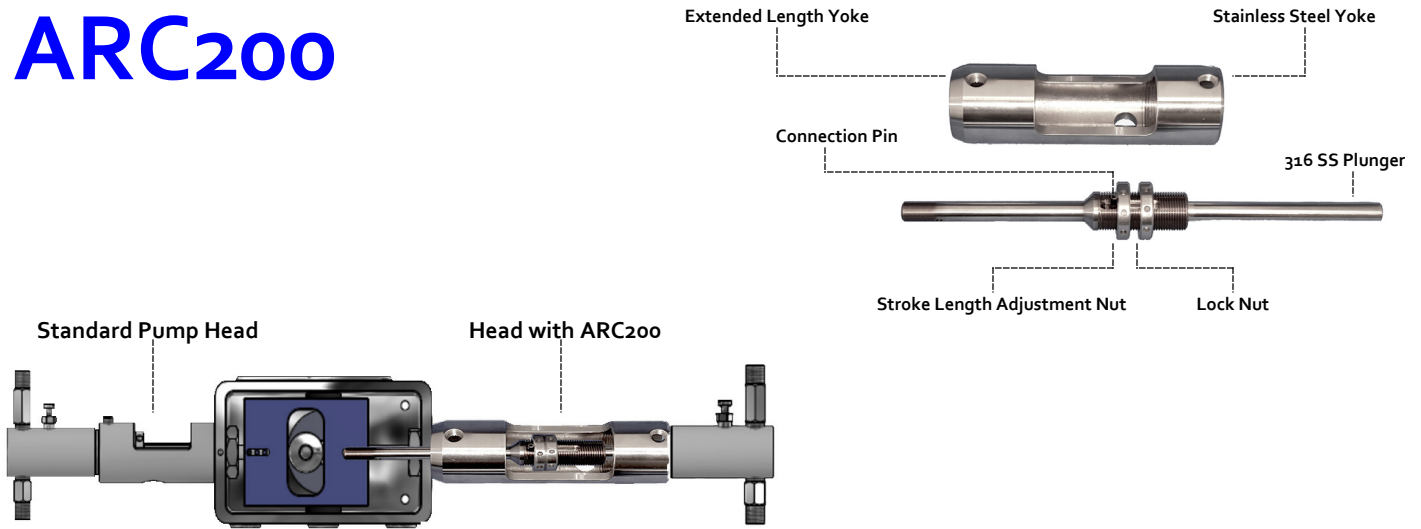

* 316 Stainless Steel Assembly

* Adjustable Rate Control

* No Pressure Build Up

* Pump Extremely Low Volumes With ALL Head Sizes
